

MASOOD NAZARI

Clinical Data Coordinator | NHS Innovation & Research | Data-Driven Programme Delivery

📍 Southampton, UK | 📞 07599 987493 | ✉️ Michaelnazary@gmail.com
🌐 [LinkedIn](#) | 🐙 [GitHub](#) | 📁 [Portfolio](#)

PERSONAL PROFILE

I have spent the last year working inside the NHS clinical research ecosystem, coordinating data infrastructure and reporting workflows for live oncology trials across 70+ external sites at the University of Southampton. That gives me a close-up view of what it takes for a health innovation to move from concept to clinical practice, and how much coordination and stakeholder management sits behind every step. It is why the work Health Innovation Wessex does matters to me.

My background is technical rather than marketing, and I will not pretend otherwise. What I bring is an MSc Distinction, five years of managing complex multi-stakeholder programmes in regulated environments, and the ability to make data mean something to people who do not work in it. The data-driven side of this role, monitoring performance, generating insight reports, and optimising based on evidence, is where I can contribute from day one. The events and campaigns craft I will develop on the job; the commitment to NHS innovation is already there.

SKILLS AND CAPABILITIES

- **Programme and Project Coordination:** Multi-stakeholder programme management, cross-site coordination, reporting workflows, GDPR-compliant governance, regulatory compliance frameworks.
- **Stakeholder Communication:** Translating complex data problems for non-technical clinical and administrative audiences. NHS investigators, trial managers, governance teams, and 70+ external partner sites.
- **Data-Driven Reporting and Analytics:** Performance analysis, dashboard design for operational decision-making, automated reporting pipelines. Python, R, SQL, Streamlit, Power BI, Tableau, Plotly, Excel (Advanced).
- **Compliance and Governance:** GDPR, GxP (ICH/FDA), NHS audit trail requirements, metadata governance, regulatory reporting frameworks.

PROFESSIONAL EXPERIENCE

Clinical Data Coordinator

Southampton Clinical Trials Unit (SCTU) | University of Southampton

Sep 2024 – Present

Southampton, UK

Coordinating data infrastructure, reporting workflows, and compliance processes for the Cancer Vaccine Launch Pad programme across three live NHS oncology trials and 70+ external clinical sites.

- **Multi-site programme coordination:** Designed the workflow for collecting and reconciling adverse event data across 70+ external sites under different NHS trusts. Built schema enforcement, automated error flagging, and a governance-approved audit trail. As much relationship and communication work as technical work.
- **Reporting and stakeholder communication:** Built a real-time reporting platform that turned raw clinical data into operational dashboards. Trial Managers could act on immediately, replacing weekly batch reports. Discrepancies are now identified **6x faster**.
- **Compliance and governance delivery:** Delivered the audit infrastructure required by GDPR and GxP frameworks, and worked it through the formal governance process until adopted. Cut QA retrieval time by **80%**.
- **Automated reporting workflows:** Automated recurring SAS and R statistical reporting for two studies, which gave research staff time back for clinical coordination.

Data Engineer (Internship)

SC Solutions | Environmental Analytics

Jun 2024 – Sep 2024

Remote/Hybrid

- Built automated geospatial ETL pipelines (Python, Google Earth Engine) to ingest multi-terabyte satellite imagery from NASA GEDI and Sentinel sources. Wrote data quality validation scripts and restructured the pipeline with parallelised feature extraction, which cut preprocessing time by **80%**. Deployed ML models across **10,000+ hectares** with SHAP-based explainability outputs.

Senior Data Analyst / Data Engineer

Parsian E-Commerce Co. | FinTech

Oct 2019 – Sep 2023

Tehran

Data engineering and analytics at a fast-growing Iranian e-commerce and payments platform.

- **Fraud detection:** Built ML-based transaction anomaly detection pipelines from scratch; fraud capture rates rose **26%**.
- **Reconciliation automation:** Replaced manual monthly financial reconciliation with SQL and Python pipelines. Cut manual handling time by **43%** and shortened the month-end close by two days.
- **Business intelligence:** Built the executive dashboard layer on structured data warehouse queries; it became the standard reporting tool for monthly leadership reviews.

Data Analyst

MaximTaxi | Private Transport Platform

Jun 2018 – Sep 2019

Tehran

- Used SQL (PostgreSQL) to identify financial discrepancies, improving supplier payment accuracy by **23%**. Built automated compliance reporting queries to replace manual Excel processes.

SELECTED PROJECTS

NIHR Research Intelligence Platform | Open Source2024

> Stack:

Python, Streamlit, Scikit-learn, Pandas, Plotly.

> Programme intelligence platform covering £171.6M of NHS research funding awards, built for non-technical stakeholders including senior NHS and parliamentary audiences. Automated reporting workflows delivered 122:1 ROI in saved analyst time. Data quality pipelines detected a 5.6% duplicate award rate and raised dataset completeness to 73.6%.

Fraud Detection Pipeline API | Open Source2024

> Stack:

Python, FastAPI (Async), NetworkX, Docker, Pydantic, Pandas.

> High-concurrency async backend processing 5 million+ financial transactions at sub-100ms latency. Graph theory algorithms detect circular fraud patterns. Explainable outputs mean every flagged transaction can be justified in an audit.

BioVision Analytics Hub | Open Source2024

> Stack:

Python, GeoPandas, LightGBM, XGBoost, Sentinel-1/2 APIs, Streamlit, Mapbox.

> Automated ETL pipeline for multi-terabyte geospatial datasets. Achieved 0.89 R² accuracy for forest ecosystem monitoring. Basis of an MSc Distinction dissertation on AI-driven geospatial forecasting.

EDUCATION

MSc Data & Decision Analytics — DistinctionSep 2023 – Sep 2024

University of Southampton, UK

> Dissertation:

“AI-driven geospatial forecasting” — Distinction. Deployed as the BioVision Analytics Hub.

> Core modules:

Advanced Machine Learning, Data Mining, Stochastic Processes, Operational Research.

BSc Materials Engineering — Distinction, Top 5% of cohortSep 2010 – Sep 2014

Semnan University

> Specialised in computational modelling and simulation.
